Project 2: Red Light/Green Light
4/07/20

Assignment:
Make a creative design that has 2 inputs and two outputs

Audience:
People stuck in quarantine who need some way to pass the time without going insane
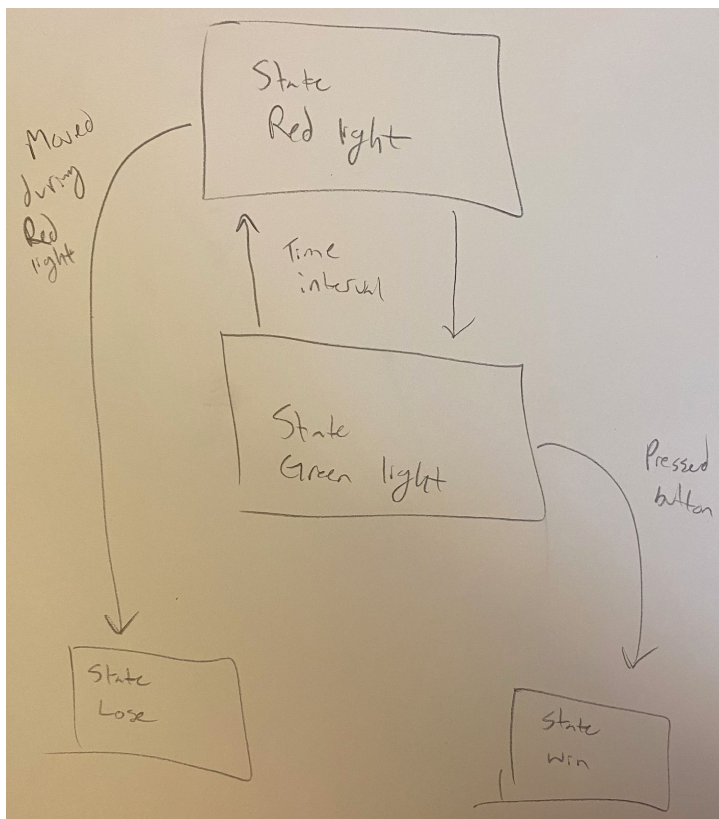

Sketch:

Interaction Map:

Schematic Diagram/State Machine:

Reflection:
This project was a lot of fun to think about but given that we couldn't get any other crazy sensors it could've been much better. If I had more accessible to me, I would've included a speaker so that you have another cue of the changing lights. Also I would use a distance sensor as opposed to a light sensor because the light sensor is a little finicky.
